

# How I made An eCommerce Website using WordPress

# First, we download and install WordPress

Priceless, and also free

Download WordPress and use it on your site.

 Download WordPress 5.7.2

[Download .tar.gz](#)

# Then we need to add a multisite function to wordpress

The first step is to add this code

```
define('WP_ALLOW_MULTISITE', true);
```

to

wp-config.php

# Then we need to add a multisite function to wordpress

The first step is to add this code

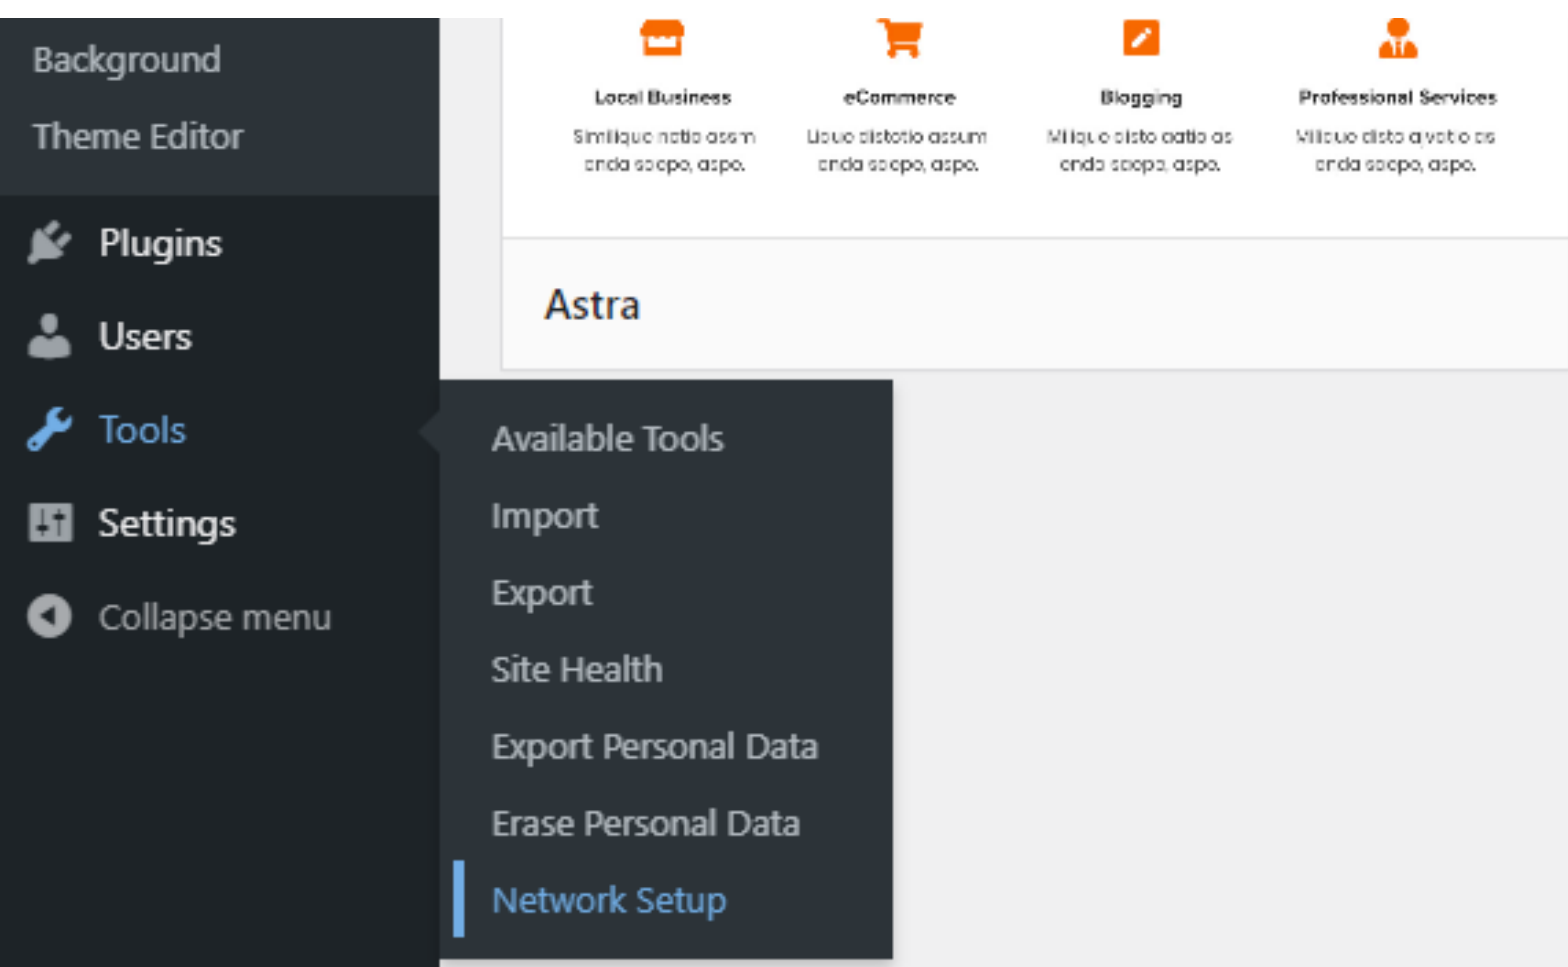

```
define('WP_ALLOW_MULTISITE', true);
```

to

wp-config.php

```
69  /* For developers: WordPress debugging mode.
70  *
71  * Change this to true to enable the display of notices during develop
72  * It is strongly recommended that plugin and theme developers use WP_
73  * in their development environments.
74  *
75  * For information on other constants that can be used for debugging,
76  * visit the documentation.
77  *
78  * @link https://wordpress.org/support/article/debugging-in-wordpress/
79  */
80  define( 'WP_DEBUG', false );
81  define('WP_ALLOW_MULTISITE', true);
82
83  /* That's all, stop editing! Happy publishing. */
84
85  /** Absolute path to the WordPress directory. */
86  if ( ! defined( 'ABSPATH' ) ) {
87      define( 'ABSPATH', __DIR__ . '/' );
88  }
89
90  /** Sets up WordPress vars and included files. */
91  require_once ABSPATH . 'wp-settings.php';
92
```

# Then find a new option in tools called setup network

# We setup network name and click on install

WordPress will give you 2 code snippets and show you where to add them

1. Add the following to your `wp-config.php` file in `C:/wamp64/www/Tutorial/wordpress/` above the line reading `/* That's all`

```
define('MULTISITE', true);
define('SUBDOMAIN_INSTALL', false);
define('DOMAIN_CURRENT_SITE', 'localhost');
define('PATH_CURRENT_SITE', '/Tutorial/wordpress/');
define('SITE_ID_CURRENT_SITE', 1);
define('BLOG_ID_CURRENT_SITE', 1);
```

2. Add the following to your `.htaccess` file in `C:/wamp64/www/Tutorial/wordpress/`, replacing other WordPress rules:

```
RewriteEngine On
RewriteRule .* - [E=HTTP_AUTHORIZATION:%{HTTP:Authorization}]
RewriteBase /Tutorial/wordpress/
RewriteRule ^index\.php$ - [L]

# add a trailing slash to /wp-admin
RewriteRule ^([_0-9a-zA-Z-]+)/wp-admin$ $1wp-admin/ [R=301,L]

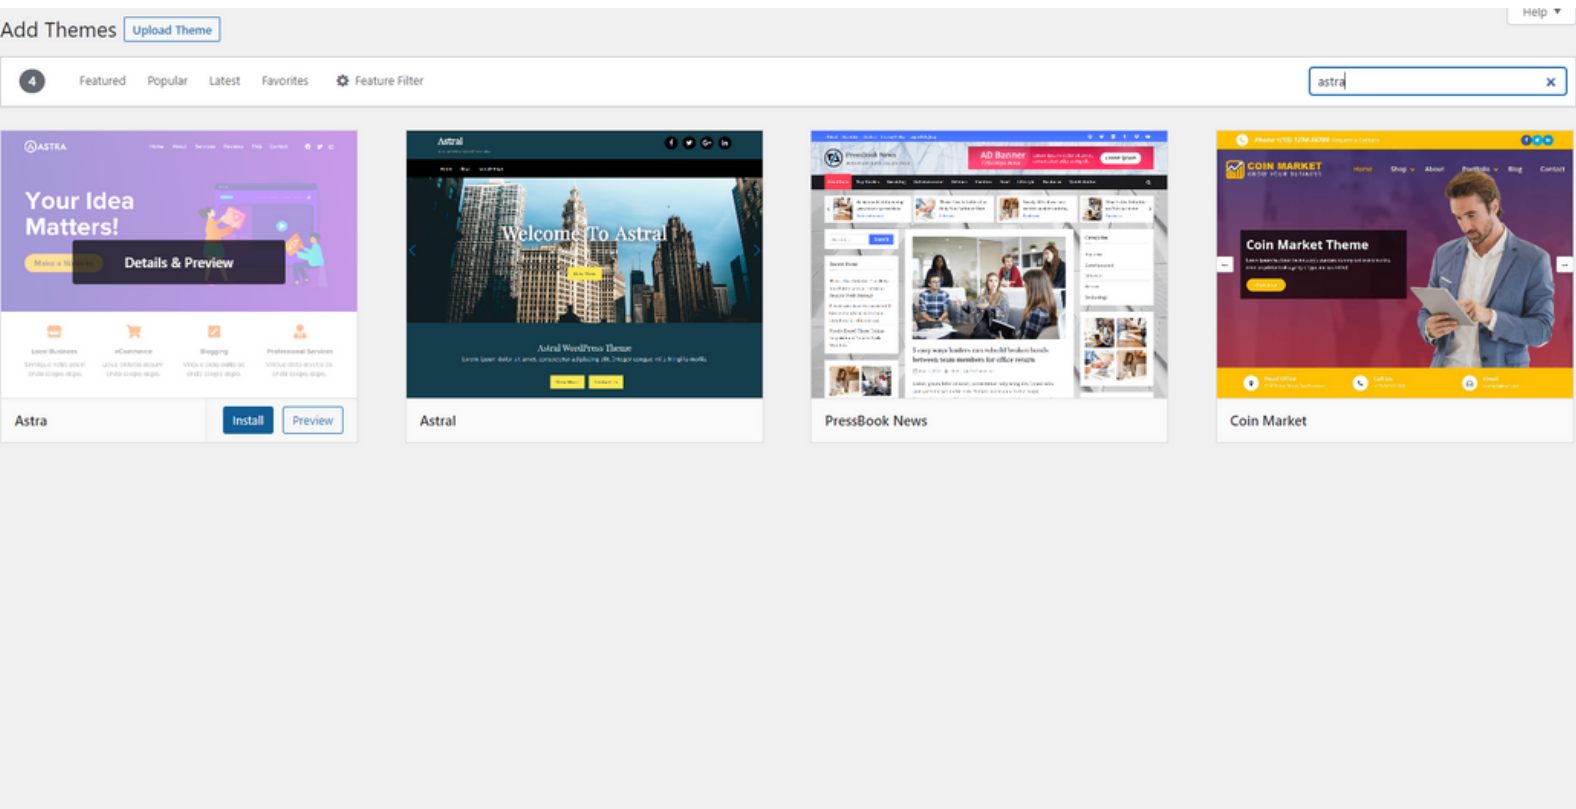

RewriteCond %{REQUEST_FILENAME} -f [OR]
RewriteCond %{REQUEST_FILENAME} -d
RewriteRule ^ - [L]
RewriteRule ^([_0-9a-zA-Z-]+)/?(wp-(content|admin|includes).*) $2 [L]
RewriteRule ^([_0-9a-zA-Z-]+)/?(.*\.php)$ $2 [L]
RewriteRule . index.php [L]
```

Once you complete these steps, your network is enabled and configured. You will have to log in again. [Log In](#)

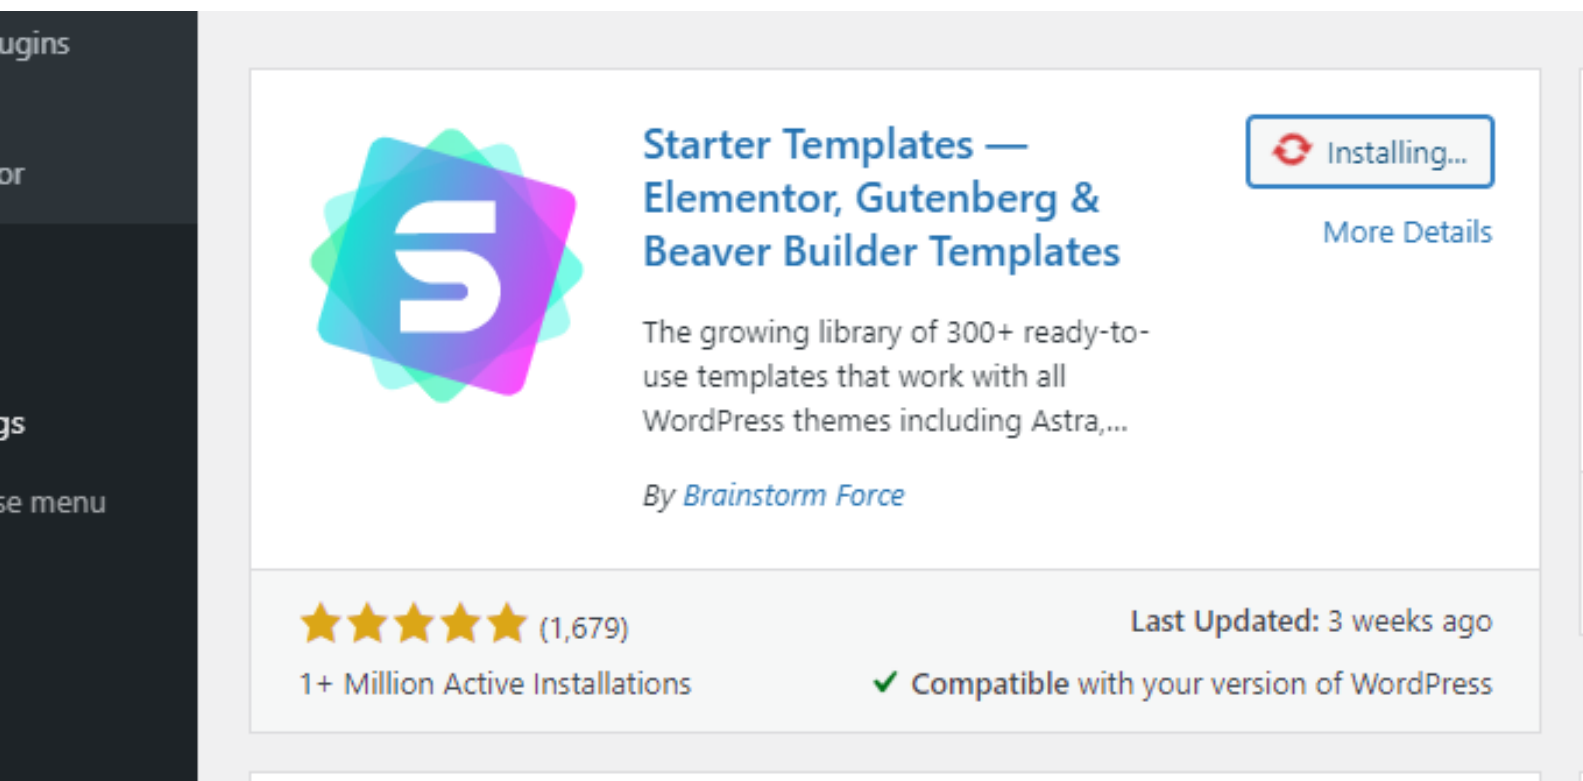

We ready now to start the project

# Now we start setting up our website

I'm going to set up Astra free theme first

After I activate it I add a new plugin called Starter Templates

The screenshot shows the WordPress plugin interface for 'Starter Templates'. On the left is a dark sidebar with menu items like 'Plugins', 'Appearance', 'Tools', 'Users', 'Media', 'Pages', 'Posts', 'Comments', 'Settings', and 'Tools'. The main content area displays the plugin details. At the top left is a logo consisting of a white 'S' inside a colorful, multi-layered hexagon. To the right of the logo, the title 'Starter Templates — Elementor, Gutenberg & Beaver Builder Templates' is shown in blue. Below the title is a description: 'The growing library of 300+ ready-to-use templates that work with all WordPress themes including Astra,...'. Below the description is the text 'By *Brainstorm Force*'. In the top right corner of the plugin card, there is a blue button with a circular arrow icon and the text 'Installing...'. Below this button is a link that says 'More Details'. At the bottom of the plugin card, there are two rows of information. The first row shows five yellow stars followed by '(1,679)'. The second row shows '1+ Million Active Installations' on the left and 'Last Updated: 3 weeks ago' on the right. Below the second row, there is a green checkmark icon followed by the text 'Compatible with your version of WordPress'.

★★★★★ (1,679)

1+ Million Active Installations

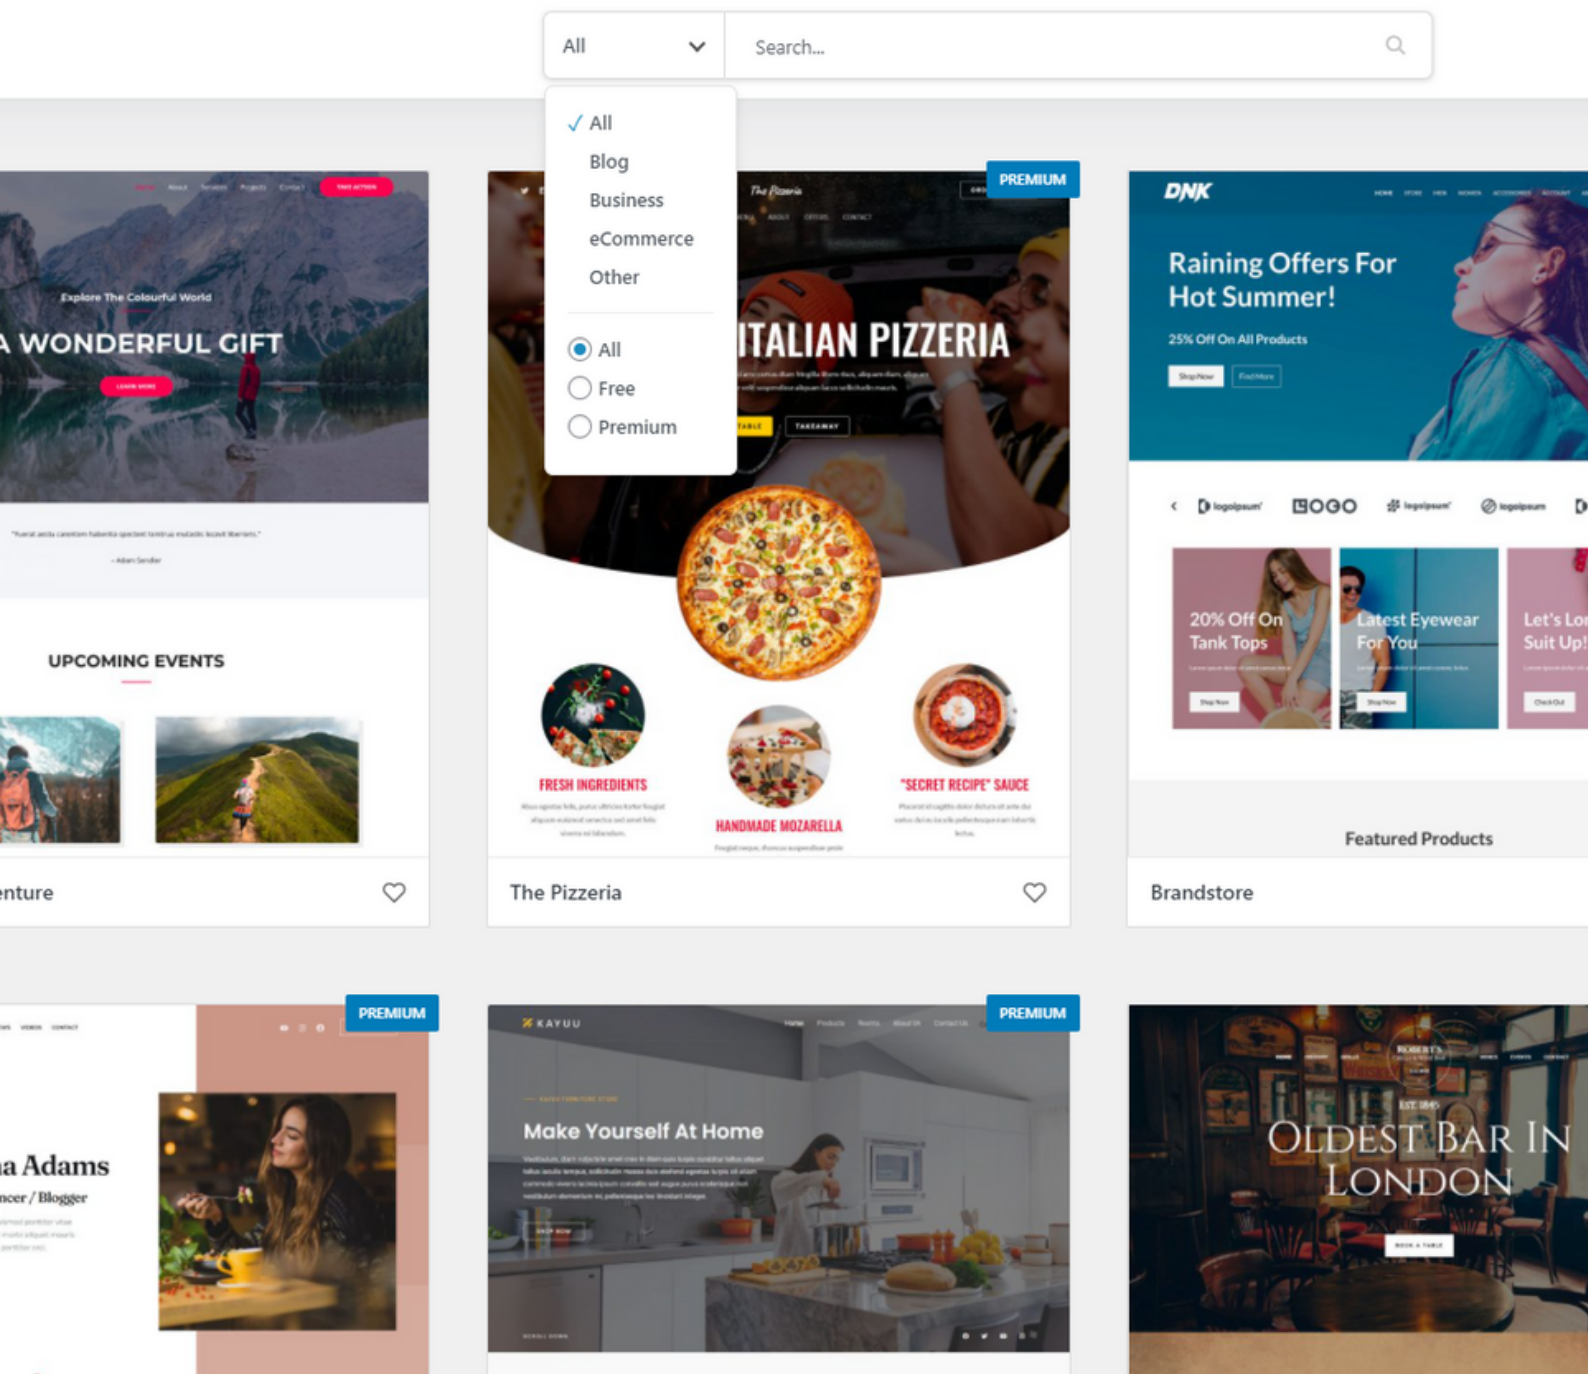

Last Updated: 3 weeks ago

✓ Compatible with your version of WordPress

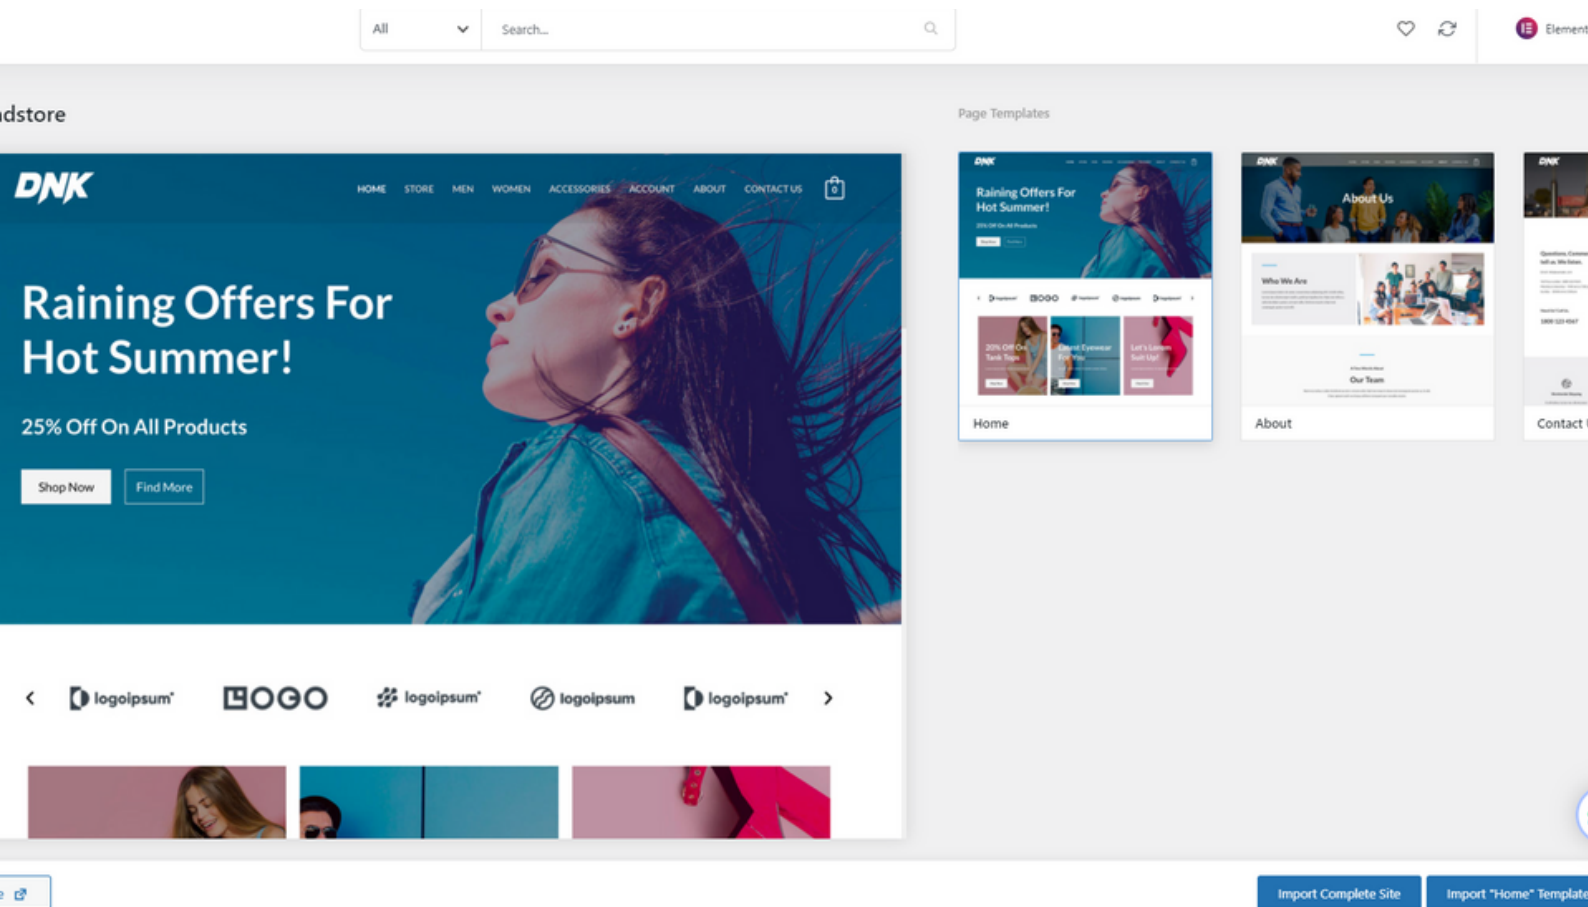

After you install it you see a new option in appearance section "Starter Templates"

After you click on it now you filter results to eCommerce and choose any theme you like

After you click on it now you filter results to eCommerce and choose any theme you like

Click on import complete site

It will also import the plugins you need

and here is some plugins I add manually
